

VPO™

VPO for Steel Capital Programs

Manage projects your way. See the entire program in one view.

VPO™
Build better, together

Why VPO holds up under scrutiny

VPO is an owner-focused environment for managing capital projects. It gives capital teams one place to run project documents, workflows, reviews, and reporting, while giving leadership consistency and visibility across the entire program.

- Proven at scale on a major steel capital project, not a pilot
- Built on Microsoft 365, so it runs inside an environment your IT and security teams already administer and trust
- Configurable to your existing project practices rather than forcing a predefined way of working
- Brings engineers, contractors, and suppliers into the project without requiring each of them to buy their own license

Proven on one of the largest steel projects in the country.

VPO gives steel producers a configurable, owner-focused environment for managing capital projects, while creating consistency and visibility across the broader program.

Trusted by Nucor

On Nucor's Brandenburg project, VPO supported more than 1,000 users, over 3,000 RFIs, and thousands of securely managed documents across a large and complex project ecosystem. Nucor evaluated six construction management solutions before selecting VPO and adopted it as an approach it could carry from one project to the next.

Proven at Project Scale

What does VPO look like on a major steel project?

VPO supported collaboration and project information management across Nucor's multi-billion dollar project ecosystem.

1,000+
Users

230k+
Tons of record-setting growth*

*Nucor shipped 230k tons of steel in Q12026, an all-time company and industry record.

One Environment.
Project to Program

Manage the work at the project level.
See what matters across the program.

VPO brings project information, workflows, collaboration, and reporting into a single environment built around the owner's processes.

PROJECT LEVEL:

Documents & Drawings
Keep project information organized, current, and accessible.

Workflows & Reviews
Manage reviews, approvals, and project processes around the way your teams work.

External Collaboration
Work securely with engineers, contractors, suppliers, and other project partners.

Project Reporting
Current project information into useful reporting without rebuilding it elsewhere.

PROGRAM LEVEL:

Consistent Processes

Portfolio Visibility

Management Reporting

Project Intelligence

Why Nucor chose VPO

Nucor evaluated six construction management solutions before selecting VPO.

Built on Microsoft 365

VPO aligned with an environment Nucor already knew and trusted.

Designed to scale and repeat

Processes developed for one project could provide a foundation for greater consistency across future projects.

Configurable to Nucor's processes

VPO could be tailored around established project practices rather than requiring Nucor to adopt a predefined way of working.

Live in weeks

VPO's QuickStart process brought Nucor's portfolio online within weeks, so leadership could start seeing results immediately.

Secure external collaboration

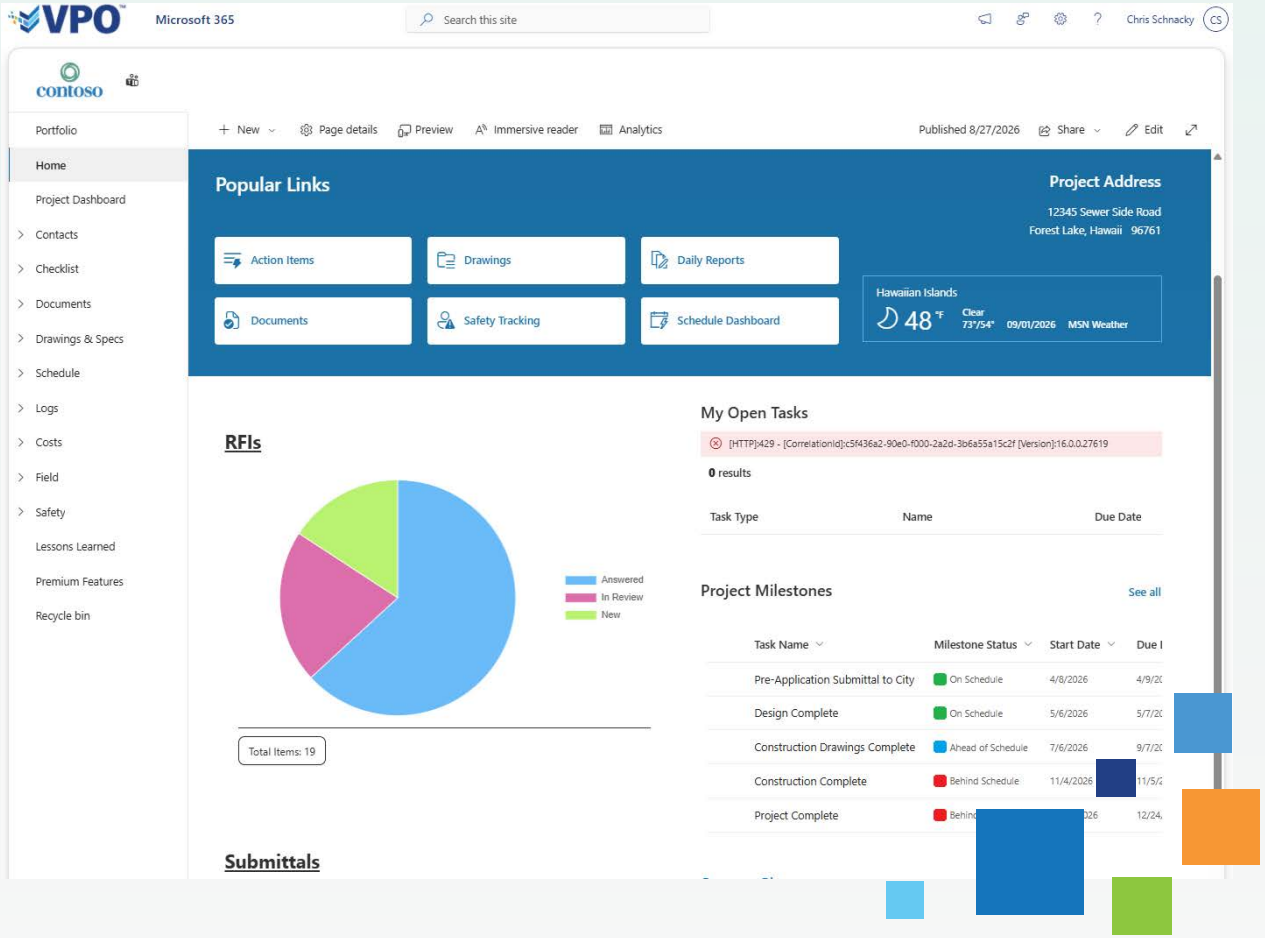

Project teams could work with suppliers, contractors, and other participants while controlling access to sensitive information.

The result wasn't simply another project system.
It was an approach Nucor could carry from project to project to drive growth at scale.

See how VPO fits your environment

Don't adapt your capital program to the software. See how VPO adapts to the way your teams already work.

The best way to understand VPO is to see it against a real problem. Bring us a process, workflow or reporting challenge from a current project, and we'll show you how it works in VPO — and how that approach could extend across your broader capital program.
